TABLEAU MINI PROJECT

Store Sales Dashboard

Prepared by: Swaroop Kumar Vathada
Program: Agileology Data Analytics Training Program
Tool: Tableau Desktop Public Edition 2026.1
Project Duration: April 5, 2026 – April 7, 2026
GitHub: github.com/swaroop456/tableau-store-sales-dashboard

1. Project Overview

This document provides complete professional documentation for the Tableau Mini Project completed as part of the Agileology Data Analytics Program. The project involved building an interactive Store Sales Dashboard using Tableau Desktop Public Edition, analyzing over 31,000 retail sales records across multiple dimensions including sales channels, product categories, customer demographics, geographic regions, and order statuses.

Field	Details
Project Title	Store Sales Dashboard
Tool Used	Tableau Desktop Public Edition 2026.1
Dataset	Store_data.xlsx
Total Records	31,047 rows
Project Duration	April 5, 2026 – April 7, 2026
Program	Agileology Data Analytics Training Program
Submitted By	Swaroop Kumar Vathada
GitHub Repository	github.com/swaroop456/tableau-store-sales-dashboard

2. Project Objectives

- Connect and explore raw retail sales data using Tableau Desktop
- Build multiple chart types to visualize different aspects of sales performance
- Design an interactive dashboard with cross-chart filters for dynamic data exploration
- Create a Tableau Story to present key business insights in a structured narrative
- Publish the workbook to Tableau Public and export deliverables for submission

3. Dataset Overview

3.1 Source File

File Name: Store_data.xlsx
Sheet: Sheet1
Total Rows: 31,047 records
Total Columns: 21 columns

3.2 Column Details

Column Name	Data Type	Description
Order ID	Text	Unique identifier for each order
Cust ID	Number	Unique customer identifier
Gender	Text	Customer gender (Men / Women)
Age	Number	Customer age in years
Age Group	Text	Age category (Adult / Senior / Teenager)
Date	Date	Order date
Month	Text	Month name of the order
Status	Text	Order status (Delivered / Cancelled / Returned / Refunded)
Channel	Text	Sales platform (Amazon / Myntra / Ajio / Flipkart etc.)
SKU	Text	Stock Keeping Unit code
Category	Text	Product category (Kurta / Set / Western Dress etc.)
Size	Text	Product size (S / M / L / XL / XXL)
Qty	Number	Quantity ordered
Currency	Text	Currency (INR)
Amount	Number	Order amount in INR
Ship-City	Text	Shipping city
Ship-State	Text	Shipping state
Ship-Postal-Code	Number	Postal code of delivery
Ship-Country	Text	Shipping country (IN)
B2B	Boolean	Whether the order is B2B or B2C

3.3 Key Data Insights

- Date range: January 2022 to December 2022 (full year data)
- 7 sales channels: Amazon, Myntra, Ajio, Flipkart, Meesho, Nalli, Others
- 4 order statuses: Delivered, Cancelled, Returned, Refunded
- 36 states covered across India
- Multiple product categories including Kurta, Set, Western Dress, Top, Saree, Ethnic Dress, Blouse, Bottom

4. Project Workflow

The project was completed in a structured step-by-step workflow as described below:

Step	Activity	Description
1	Tool Setup	Installed Tableau Desktop Public Edition 2026.1 on Windows PC
2	Data Connection	Connected Store_data.xlsx via Microsoft Excel connector in Tableau Desktop
3	Data Verification	Verified data types, column names, and row count on the Data Source screen
4	Chart Building	Built 7 individual chart sheets with appropriate dimensions and measures
5	Dashboard Design	Combined all charts into an interactive Store Sales Dashboard
6	Interactivity	Added cross-chart filters using the Use as Filter feature
7	Story Creation	Created a 5-point Tableau Story with business insight captions
8	Export	Exported Dashboard PDF, Story PDF, and packaged .twbx workbook
9	Publishing	Saved and published workbook to Tableau Public profile
10	GitHub Upload	Uploaded all project files to GitHub repository

5. Charts & Sheets Created

A total of 7 individual chart sheets were built, each focusing on a different dimension of the sales data.

5.1 Monthly Sales Trend — Line Chart

Sheet Name: Monthly Sales Trend
Chart Type: Line Chart
Dimension (X-Axis): MONTH(Date) — Date field truncated to Month level
Measure (Y-Axis): SUM(Amount)
Purpose: Shows how total sales amount trended across each month of 2022

Steps Followed:

- Dragged Date field to Columns shelf
- Right-clicked Date in Columns and selected Month to truncate to monthly level
- Dragged Amount to Rows shelf — Tableau auto-applied SUM aggregation
- Selected Line Chart from the Show Me panel on the right

Key Insight:

- Sales peaked in March-April 2022 and gradually declined toward year-end

5.2 Sales by Channel — Bar Chart

Sheet Name: Sales by Channel
Chart Type: Horizontal Bar Chart
Dimension: Channel (Amazon, Myntra, Ajio, Flipkart, Meesho, Nalli, Others)
Measure: SUM(Amount)
Purpose: Compares total revenue generated by each sales platform

Steps Followed:

- Dragged Channel to Columns and Amount to Rows
- Selected Bar Chart from Show Me panel
- Sorted bars in descending order for better readability

Key Insight:

- Amazon is the top-performing channel followed by Myntra and Flipkart

5.3 Orders by Status — Pie Chart

Sheet Name: Orders by Status
Chart Type: Pie Chart
Dimension: Status (Delivered / Cancelled / Returned / Refunded)
Measure: COUNT(Qty)
Purpose: Shows the distribution of order statuses across all orders

Steps Followed:

- Dragged Status to Color in the Marks card
- Dragged Qty to Rows and changed aggregation to Count
- Selected Pie Chart from Show Me panel

Key Insight:

- Majority of orders (approx. 92%) were successfully delivered

5.4 Top 10 States by Sales — Horizontal Bar Chart

Sheet Name: Top 10 States
Chart Type: Horizontal Bar Chart
Dimension: Ship-State — filtered to Top 10 by Amount
Measure: SUM(Amount)
Purpose: Identifies which Indian states contribute the most to revenue

Steps Followed:

- Dragged Ship-State to Rows and Amount to Columns
- Right-clicked Ship-State in Rows and applied Top 10 filter by SUM(Amount)
- Sorted bars in descending order

Key Insight:

- Maharashtra, Karnataka, and Uttar Pradesh are the top 3 revenue-generating states

5.5 Gender & Age Group Sales — Stacked Bar Chart

Sheet Name: Gender & Age Group
Chart Type: Stacked Bar Chart
Dimensions: Age Group (Columns) + Gender (Color)
Measure: SUM(Amount)
Purpose: Compares sales contribution by gender across different age groups

Steps Followed:

- Dragged Age Group to Columns and Amount to Rows
- Dragged Gender to Color in Marks card — bars automatically stacked by gender

Key Insight:

- Women dominate purchases in all age groups, especially in the Adult category

5.6 Sales by Category — Bar Chart

Sheet Name: Sales by Category
Chart Type: Vertical Bar Chart
Dimension: Category (Kurta, Set, Western Dress, Top, Saree etc.)
Measure: SUM(Amount)
Purpose: Shows which product categories generate the highest sales

Steps Followed:

- Dragged Category to Columns and Amount to Rows
- Selected Bar Chart from Show Me and sorted descending

Key Insight:

- Set and Kurta are the top-selling product categories

5.7 State-wise Sales Map — Geographic Map

Sheet Name: State Map
Chart Type: Filled Geographic Map
Dimension: Ship-State (Geographic role assigned automatically)
Measure: SUM(Amount) shown as color intensity
Purpose: Visualizes geographic distribution of sales across India

Steps Followed:

- Dragged Ship-State directly to the canvas — Tableau auto-detected it as geographic data
- Tableau automatically generated latitude and longitude
- Dragged Amount to Color in Marks card — darker blue indicates higher sales

Key Insight:

- Southern and western states show higher sales density — Maharashtra and Karnataka are visibly darker

6. Store Sales Dashboard

6.1 Dashboard Overview

After building all 7 individual chart sheets, they were combined into a single interactive Store Sales Dashboard. The dashboard provides a unified view of all key sales metrics on one screen.

Dashboard Name: Store Sales Dashboard
Size: Automatic (fits any screen)
Total Charts: 7 visualizations + legends
Interactivity: Cross-chart filters using Use as Filter feature

6.2 Dashboard Layout

Position	Chart	Chart Type
Top Left	Sales by Channel	Horizontal Bar Chart

Top Centre	Monthly Sales Trend	Line Chart
Top Right	Gender & Age Group	Stacked Bar Chart
Bottom Left	Orders by Status	Pie Chart
Bottom Centre	Top 10 States	Horizontal Bar Chart
Bottom Right	State Map	Geographic Map
Right Panel	Status & Gender Legends	Legends + KPI values

6.3 Interactivity Added

- Use as Filter enabled on all 7 charts — clicking any bar, slice, or state on the dashboard dynamically filters all other charts
- Cross-chart filtering allows drill-down analysis — e.g., clicking Amazon in Sales by Channel updates all other charts to show only Amazon orders
- Filter actions applied across Channel, Month, and Ship-State dimensions

7. Tableau Story

7.1 Story Overview

A Tableau Story was created to present the key business insights from the data in a structured, presentation-style format. Each story point focuses on a specific insight derived from the analysis.

Story Name: Store Sales Story
Total Story Points: 5

7.2 Story Points

Story Point	Caption	Chart Used	Key Insight
1	Sales Peaked in March-April 2022	Monthly Sales Trend	Highest revenue months were March and April 2022
2	Amazon is the Top Selling Channel	Sales by Channel	Amazon contributed the highest revenue among all platforms
3	Maharashtra Leads in Sales	Top 10 States	Maharashtra is the #1 state by total sales amount
4	Geographic Amount Distribution	State Map	Sales are concentrated in western and southern India
5	Complete Sales Overview	Store Sales Dashboard	Full interactive dashboard showing all metrics together

8. Key Business Insights

#	Insight	Finding
1	Top Sales Month	March 2022 recorded the highest sales amount
2	Top Sales Channel	Amazon dominates with the highest revenue share

3	Top State	Maharashtra is the #1 state by total sales
4	Customer Demographics	Women are the majority buyers across all age groups
5	Top Age Group	Adult age group contributes the highest sales volume
6	Top Product Category	Set and Kurta are the best-selling product categories
7	Order Success Rate	Majority of orders (~92%) were successfully delivered
8	Geographic Concentration	Western and southern states drive most of the revenue

9. Tech Stack

Tool / Technology	Version	Purpose
Tableau Desktop Public Edition	2026.1	Primary tool for data visualization and dashboard creation
Microsoft Excel	Store_data.xlsx	Source data file with 31,047 records
Tableau Public	Web Platform	Publishing and sharing the workbook online
Git & GitHub	Latest	Version control and portfolio hosting

10. Project Deliverables

File Name	Type	Description
Store_data.xlsx	Excel	Raw source dataset with 31,047 records
Tableau_Mini_Project.twbx	Tableau Packaged Workbook	Complete workbook with all sheets, dashboard, and story
Tableau_Mini_Project_Dashboard.pdf	PDF	Exported dashboard with all 7 charts
Tableau_Mini_Project_Story.pdf	PDF	Exported 5-point story presentation
Tableau_Mini_Project.pdf	PDF	Full workbook export including all sheets

11. Challenges Faced & Solutions

Challenge	Cause	Solution
Line chart showing dots instead of connected line	Month field was Text type, not Date type	Used the Date field instead of Month, then truncated to Month level using right-click
Browser version gave file path error	Tableau Public web version loses local file path after upload	Switched to Tableau Desktop installed application for stable data connection
Warning popup for Order ID in pie chart	Order ID had 28,471 unique values — too many for a shelf	Used Qty field with Count aggregation instead of Order ID
Dashboard background not changeable	Dashboard canvas was fully covered by charts	Used Format menu > Dashboard option to change background color

12. Conclusion

This Tableau Mini Project successfully demonstrated the ability to connect raw data, build multiple chart types, design an interactive dashboard, and present data-driven insights through a structured story. The project covered the full Tableau workflow from data connection to publishing on Tableau Public.

Key skills strengthened through this project include data visualization, dashboard design, geographic mapping, interactive filtering, and business storytelling — all of which are core competencies required for a Data Analyst role.
